

European  
AIDS Treatment  
Group

## Research priorities

- 1) Patient centredness: this approach also reduces stigma
- 2) Research to better understand the psychosocial impact of Hiv infection and implementation research on how this aspect can be addressed in routine care
- 3) Interaction with recreational drugs
- 4) Non communicable diseases: we need data (and to make them available) on strategies which are closer to our needs
- 5) Prevention of comorbidities: we need more research on consequences of Hov and other co-infection, neurocognitive impairment
- 6) More research and data on neglected groups, such as Sex Workers, trans people, prisoners.
